

Sharon Crabb

Ms. Crabb's 28 years of environmental management experience includes expertise in surface water quality and watershed planning. While with TCB, she managed watershed planning and implementation projects for the municipal storm water programs of City of Houston and Harris County, affecting the 20 watersheds in the 1,800 square mile region. These projects involved assisting the City of Houston in development of their industrial storm water inspection program; evaluation and conceptual design of storm water quality improvements at over 80 municipal facilities; and research on storm water best management practices suitable to specific geographic factors (including low impact development). She also managed development of eight Phase II storm water management programs. She has managed third-party evaluation and comments on pathogen TMDL models and reports; technical comments on Water Quality Standards; evaluation of opportunities to improve the Water Quality Standard/TMDL process; and identification of implementation options. She currently manages ENSR's South Central Region Water Resources Section.
