

Name: Robert Adair

Current Position: President

Current Employer: Construction EcoServices

Summary of Previous Experience:

Bob is a co-founder and Steering Committee Chair for the Houston Land/Water Sustainability Forum, which engages the broadest possible range of constituent groups, from planners and design professionals to contractors, from policy shapers and regulators to permitting authorities, in a collaborative effort that focuses on practical application rather than abstract theory in the exploration of incremental answers to some of the Houston area's most significant land/water sustainability issues.

Across this country and the world, new ideas, methods, materials and technologies aimed at positively impacting the sustainability of land and water resources have been widely adopted, some are being developed right here in Houston. The forum was formed to provide exposure to the full range of these practices, to encourage their adoption, their adaptation where needed for the conditions found in our community—and to foster creativity in both the implementation of sustainable solutions and the regulatory infrastructure that enables them.

Bob's company, Construction EcoServices, delivers solutions to developers and design professionals charged with integrating permanent storm water quality and management systems into new projects. Always at the leading edge, the company has introduced a variety of groundbreaking storm water quality product and service solutions to the Texas market since 2002.
